ARCHITECT: DC Architects, Upland, Calif.

PRODUCT: Met-Tile tile facsimile (64,000 square feet)

FINISH: Copper Penny Super 4800 SMP

MATERIAL: 26-gauge Zincalume steel

The building team chose the Met-Tile profile because it was searching for a product with more of a residential look with the durability and low maintenance metal is known for. The Met-Tile panels, combined with the Spanish-style flashings, optimized the Mission look. The school's architecture coordinates with design features implemented throughout the Avalon community, including a distinctive Spanish-style exterior, gable-end roofs, and dramatic covered entryways within each of the seven school buildings.
