

project: log home

PRIVATE RESIDENCE, PIEDMONT, OKLA

...

INSTALLER: Callahan Steel Buildings, Mustang, Okla.

This project represented Callahan's first opportunity to install standing seam panels on a million-dollar custom log home. The homeowner decided to double insulate the roof, requiring 3/4-inch Cellofoam foam board cut between 1x4 slats that nailed to the decking. SFS intec low-profile pancake head screws were used, as were Velux skylights.

PRODUCT: Central States Manufacturing Horizon-Loc
