**ADAGIO CONDOMINIUMS,
PANAMA CITY BEACH, FLA**

...

INSTALLER: Ameritech Enterprises, Inc.,
Panama City, Fla.

ARCHITECT: Collins & Associates, Panama City, Fla.

Collins & Associates incorporated a retrofit system with a new construction project. The design called for a sloped purlin system with a metal deck over a flat roof.

The retro-frame system, provided by Reroof America Corp., of Bethany, Okla., was chosen over a truss system and took about a third of the time to install. The use of a retrofit system eliminated about 40 percent of the cost associated with crane rentals and required 50 percent fewer fasteners than a truss system. Contractors were able to spread 15-20 workers around the roof to work on various sections of the system at the same time. The Englert Series 1300 system meets wind and uplift requirements set by the 2003 Florida Building Code, Dade County uplift testing, UL uplift standards, and ASTM uplift standards.

PRODUCT: Englert Series 1300 standing seam panels

FINISH: Sandstone PermaColor 2000 Kynar 500

MATERIAL: .032 aluminum
